## DOUBLE CORN YIELD

Soil Should be Broken Two Inches Deeper Than Previously and Seed Should be Carefully Tested.

(By W. T. Bamberg, Agricultural Supt. Q. & C. Ry., Lexington, Ky.)

Corn in the South should make its largest yields. Yet the contrary is evidenced by the report of the Bureau of Statistics:

AVERAGE CORN YIELDS 1908.

Kentucky . . . . . 25.2 bu.  
Tennessee . . . . . 24.8 bu.  
Alabama . . . . . 14.7 bu.  
Georgia . . . . . 12.5 bu.  
Pennsylvania . . . . . 39.5 bu.  
Ohio . . . . . 38.5 bu.  
Wisconsin . . . . . 33.7 bu.  
Iowa . . . . . 31.7 bu.

The average yield of the four Northern States was 38.85 bushels, while the average yield of the four Southern States was only 19.3 bushels. There is no reason why the Southern farmer cannot produce just as large crops as his Northern brother. Let the farmers in the States above mentioned follow the lines of work herein laid down and there will be a doubling of the yields. It may require a little more work. The pay for the additional work will be larger than that received by the skilled mechanic.

Breaking—Flat break the soil two inches deeper than at last plowing. (This should be done in October or November, but December is not too late.) Sub soil if you have or can get, a sub-soiler.

Testing Seed—As you have not properly saved your seed, go now to the crib and select a number of ears of corn—say three times the number required to plant the coming year's crop. These ears must be straight rowed and filled with grains at butt and tip; the grains should be deep and of uniform color; the cobs should be of same color and not too large. Small cobs dry out quicker. Tie a shipping tag to each ear. Make a shallow box, one which will hold one or more of the pasteboard sections used in egg cases. Fill the squares nearly full of clean sand, or porous soil. Water well. From one of the ears of corn take six grains from six different portions of the ear including the butt and tip, and place them flat in the upper left hand square in the box (which should be marked) and mark on the tag attached to that ear the figure 1. Do the same with another ear, placing the six grains from that ear in the square below the first, and number the tag on that ear 2, and so continue until all the ears are represented in the box and the tags properly marked. Cover the squares with sod or earth, water and set away in a warm place in the barn or the house. In 120 hours examine the box commencing at No. 1. If the six grains in that ear have germinated, and the germination is vigorous, then save the ear numbered 1 on the tag, for seed. And so continue through all the squares, retaining for seed only such ears as show a 100 per cent. germination for entire six grains, and rejecting such ears as do not show germination. Thus you will have for your seed only such ears as show a 100 per cent. germination and you are practically assured of a perfect stand.

Harrowing—As your soil is cemented or run together by the winter rains, run a toothed harrow over it to permit the entrance of air and subsequent rains.

Planting—Plant at the customary time. If your field is flat, then check at three and one-half feet and work both ways with a riding cultivator. If the ground is rolling and liable to wash, plant in rows five feet apart and thin to two feet in the drill. Plant shallow. Deep planting has lost more crops than it has ever made. But here, as in all farm operations, a great deal must be left to the judgment of the operator and local conditions.

Cultivation—Commence cultivating as soon as the shoots

appear above the soil and cultivate shallow. Keep the surface of the soil pulverized. The nearer dust you make it the better. Grass will not grow in dust. Cultivate till in roasting ear and at the last cultivation plant cow peas in the middles.

Cover Crops—When ripe gather the peas, pull the corn and then run a stalk cutter over the corn stalks and pea vines and turn all under. Sow oats, rye or barley for a winter cover crop, and follow with cotton.

Saving Seed—When tassels begin to shoot is the time to detassel for seed for the following year. Pull or cut the tassels out of every other row in the richest part of your field—detasseling enough rows to give you ample seed for the coming year. When detasseling pull up all the infertile stalks in the adjoining rows. When the crop is matured save your seed from the detasseling rows, first gathering the ears from those stalks having two or more ears.

Follow this line of work each year and year by year the crops will be larger, provided a rotation of crops is had.

## EIGHTY YEARS OLD

Joseph Bankson, a Prominent Insurance Man and Much Esteemed Citizen of Bethany, Ill., Strongly Recommends

VINOL FOR OLD PEOPLE.

"I am past eighty years of age and for some time I had been losing strength and suffering from a chronic cold and lung trouble, until I was seriously ill and could not get out of doors. My son sent me some Vinol. I commenced to take it and it has simply worked wonders for me. I feel better and stronger than I have for years, and my cough is all gone. There is no other medicine equal to Vinol to build up health and strength for elderly people." Joseph Bankson, Bethany, Ill.

This is because Vinol is the best cod liver and iron tonic in the world. It creates a hearty appetite, strengthens the digestive organs, makes rich, red blood and replaces weakness with strength. The beneficial effect of Vinol in cases of feeble old health is simply remarkable.

We invite all old people, delicate children, weak, run-down persons, convalescents, or those suffering from chronic colds, coughs or bronchitis in this vicinity to try Vinol on our offer to return their money if it does no good. We make this offer to show our faith in Vinol. Wm. S. Lloyd, Druggist, Mt. Sterling.
